**112 AMENDMENT OF TARIFF CHARGES
FOR WATER SERVICES AND SEWERAGE
AND SANITATION SERVICES: 2023/24**

1 STRATEGIC THRUST

Enhancing Financial Sustainability.

2 OBJECTIVE

The purpose of this report is for Council to consider the amendments made to the Tariff Charges for Water, Sewerage and Sanitation Services in order to initiate the process of public consultation.

3 PROPOSED TARIFF INCREASE

The proposed tariff increases for the 2023/24 financial year applicable to the various tariff bands are as follows:

- First 6 kl to be provided free for residential customers.
- Residential post-paid and prepaid water revenue to be increased on average by 9.3%.
- Residential post-paid and prepaid sanitation tariffs to be increased on average by 9.3%.
- Institutional tariffs to be increased by 9.3% for both consumption up to 200kl and consumption exceeding 200kl to narrow the gap compared to commercial tariff.
- Industrial/Commercial tariffs to be increased by 9.3%
- Demand Levy to be increased by 9.3%
- All other tariffs to be increased by an average of 9.3%

The budgeted average tariff increases for 2023/24 is 9.3%. The tariff increases for 2024/25 and 2025/26 are purely indicative.

4 MOTIVATION

The following are guidelines motivating the proposed tariff:

- 6kl free water

Studies indicate that the continued supply of water internationally will continue to be under threat. South Africa is considered a country in which water scarcity is a real threat. The approach to the structure of the proposed tariff is to emphasise the importance of water as a scarce resource and create a culture of controlled consumption. It is not in the interest of the scarcity of water and financial sustainability of the municipality to continue providing free water to all residents.

City of Johannesburg Council 2023-03-22/23

COJ : MAYORAL COMMITTEE 2023-03-17

JOHANNESBURG WATER (SOC) LTD

In the future tariffs, the entity intends to re-introduce a charge on the first 6kl of water for all other residents. High consumers will continue to pay at a higher rate in order to incentivise the saving of water.

- Tariffs are to be cost reflective while taking equity and sustainability into account as per the guidelines in the Municipal Systems Act and the Water Services Act.
 - Tariffs must reflect the cost reasonably associated with rendering the service, including capital, operating, maintenance, administration and replacement costs, and interest charges.
 - Tariffs must be set at levels that facilitate the financial sustainability of the service, taking into account subsidisation from sources other than the service concerned.
 - The economic, efficient and effective use of resources and other appropriate environmental objectives will be encouraged.
 - The metering of previously deemed consumption areas through the Soweto Infrastructure Project, in conjunction with the favourable tariff structure, is an important step towards the objective of the economic, efficient and effective use of resources. The initiative strongly supports demand side management.
- In terms of the extended social package, the provision of free basic water to registered indigents will be up to 15kl per household, depending on the poverty index.
- The amount individual users pay for services should generally be in proportion to the use of that service and users of municipal services should be treated equitably in the application of tariffs.

Deemed consumption charges are currently not uniform across the City. Soweto, for example, is billed on deemed consumption of 20kl per connection per month, whereas Alexandra as well as Orange farm is billed on a deemed consumption of 10kl and 5kl per connection per month respectively. The entity continues to pilot prepaid metering projects for the purposes of converting the deemed areas to consumption based metering. For 2023/24 the pre-paid tariff would continue to be based on a rising block tariff structure. The subsidised rising block tariff for ex-deemed consumption areas (introduced in 2003/4) ensure that these customers are now charged proportional to usage following the Soweto Infrastructure Project interventions.

112.3

City of Johannesburg Council 2023-03-22/23

COJ : MAYORAL COMMITTEE 2023-03-17

JOHANNESBURG WATER (SOC) LTD

For households benefiting from the Soweto Infrastructure Project in deemed consumption areas and new private developments such as Protea Glen Ext 4; Lehae and Cosmos City, the following apply:

- A subsidised water and sanitation rising block tariff.
- A consumption-based tariff for both water and sanitation.
- Incentive based debt write-off policy.

Customers who have prepayment meters installed, qualify for a progressive monthly write-off effective from the date of meter installation, over a three-year period. Defaulting customers in terms of transgression of by-laws will have the debt written off reversed retrospectively with interest.

- For households in informal settlements
 - Free rudimentary Service (LOS 1) service levels
 - Free water tanker services.
 - Free vacuum tanker services
- Should a decision be made in future to roll out the prepaid meters to all areas in the city, the prepaid tariff has to be brought in line with the conventional tariff.
- The Managing Director of Johannesburg Water will have the authority to negotiate with customers who receive a special tariff, due to older arrangements with the City, to bring these special tariffs in line with the regular tariff.

 Se = Total Selenium;
 Zn = Total Zinc.
 pH = - log [H³⁰⁺]
 FOG = Total fat, oil and grease

As determined by the analytical methods used by the CYDNA Scientific Services Laboratory of Johannesburg Water (SOC) Ltd.

It is important that the sewer system is protected against acidic effluents and the charge for pH is therefore punitive. Similarly, metals are detrimental to the environment and the metal charge is also punitive. In addition, the discharge of excessive quantities of fat, oil and grease (FOG) into the sewer system causes blockages which is a public nuisance, a health risk and impedes the proper operation of the City's Waste Water Treatment Works. Hence the FOG charge is also punitive. Therefore, in cases where the Water Services By-laws are violated, pH will be assessed on the lowest and metals and FOG on peak values recorded during a six monthly period, irrespective of whether the industrial effluent volume discharged during that period is less than the value stipulated in clause 4.2 below.
